

***Amount Requested: \$2,000,000***

The Solar Energy Consortium (TSEC) would facilitate Orange Community College in creating a campus center designed to provide outreach to municipalities, commercial enterprises, and non-profit organizations, on renewable energy technologies, and subsequently consulting and educational services. The center will house mock-up demonstrations of renewable technologies. These renewable technologies will be placed on campus feeding back to the center where data will be publicly displayed. Ten jobs will be created by the project and the center will prepare students, community and industry members for successful careers in the renewable energy field.
